

ART: LANE E MELANGE- MULESING FREE

What is "Mulesing", a practice that CHIOCCARELLO SRL fights firmly and does not accept absolutely to use wool obtained with this system?

It is a practice used in large breedings of merino sheep to reduce infections from larvae able to ruin the woolly fiber of the sheep, which consists in blocking the animal with metal bars and cut strips of live flesh in the perianal area including the tail, thus leaving the flesh alive and bleeding.

Everything takes place without any type of anesthetic and, sometimes, with the use of shears, creating great suffering to the animal.
